3rd THEMATIC SCHOOL

ARTIFICIAL INTELLIGENCE FOR HEALTH

FROM DECEMBER 4th TO DECEMBER 7th, IN TOULOUSE

PRESENTATION

Artificial Intelligence is now a key element in the development of medical techniques. Its use in both detection and therapy involves a wide range of techniques, from logical description to deep learning.

Following on from the themes of the connected city and generative models, this third themed bi-national school will focus on AI applied to the healthcare sector. Taking place from 4 to 7 December 2023 in Toulouse, and built around a series of courses and conferences, it will offer multi-disciplinary Franco-Mexican teams the chance to challenge each other during a hackathon using real data sets.

Speakers will include French and Mexican professors accustomed to working at the interface between medicine and IT, as well as speakers from the medical world.

Built around a series of courses and conferences, it will offer teams from France and Mexico the chance to challenge each other in a hackathon using real data sets. Lecturers will include French and Mexican professors used to working at the interface between medicine and IT, as well as speakers from the medical world.

The school is open to all undergraduate, bachelor of science, master's and doctoral students in the field of artificial intelligence, who are studying at a higher education establishment in France or Mexico.
